Education

San Jose State University

Jan 2025 – Expected Dec 2026 | San Jose, CA

- **Master of Science, Software Engineering** | GPA: 3.7/4.0
- Coursework: Enterprise Distributed Systems, Software Systems Engineering, Enterprise Software Application

National Institute of Technology

Aug 2018 – Jun 2022 | Meghalaya, India

- **Bachelors, Computer Science & Engineering** | GPA: 3.5/4.0
- Coursework: Data Structures & Algorithms, Object Oriented Programming, Database Management Systems, Computer Networks, Operating Systems, Agile Methodologies

Experience

Software Engineer, Tekion Corp

Jul 2022 – Dec 2024 | Bengaluru, India

- Built and optimized real-time transaction status from **short-polling to Server-Sent Events**, reducing latency from over **3s to less than 500ms** and increasing Tekion pay adoption by over **45%**.
- Re-architected the Accounts Receivable (AR) invoices page search engine, **replacing inefficient multi-field MySQL queries** with a dedicated **Elasticsearch index** impacting **900+** onboarded dealerships.
- Accelerated the rendering of AR invoices page by implementing **List virtualization** for a **React Table** rendering **10,000+** records, eliminated main-thread blocking to ensure fluid, **60 FPS** scrolling and filtering.
- Scaled a **microfrontend architecture** by integrating **Webpack Module Federation** across **8** interdependent sub-modules under Accounting module, facilitating secure, dynamic code deployments.

Software Engineer Intern, Tekion Corp

Jan 2022 – Jun 2022 | Bengaluru, India

- Improved the developer experience by engineering a **JSON-driven forms engine** that automated custom form generation, reducing new dealer configuration time for engineering teams by **55%**.
- Revamped vehicle comparison page by leveraging **Next.js hybrid rendering model** (Static Site Generation + Client Side Rendering), resulting in a **60% Largest Contentful Paint(LCP)** reduction and a transition from 'Poor' to 'Good' **Google Lighthouse** score.
- Automated code quality checks by configuring **Git pre-commit hooks** and integrating a comprehensive test suite into the Account Receivable Module **Jenkins CI/CD pipeline**, increasing project-wide test coverage from **20%** to over **85%** and preventing bug regressions.

Technical Skills

- **Programming Languages:** JavaScript(ES6+), TypeScript, Java, C++, Python, SQL
- **Frontend:** Next.js, React.js, Redux, TanStack Query, Material UI, Jest, React Testing Library(RTL)
- **Backend:** Node.js, Spring Boot, FastAPI, Microservices, Spring Data JPA, JDBC, REST APIs, JUnit
- **Databases & Message Queues:** MySQL, NoSQL, Redis, RabbitMQ, Kafka, MQTT
- **AI/ML:** LLM Integration, LangChain, RAG, Vector Databases, Gemini API
- **DevOps/Cloud:** Git, Docker, Kubernetes, CI/CD(Jenkins), AWS (EC2, S3, Lambda)

Academic Projects

AI-Powered Customer Support Assistant | Python, FastAPI, LangChain, RabbitMQ, Docker, Kubernetes, Google GenAI SDK, Google AI Studio, ChromaDB, Amazon MQ, AWS(ECR, EC2), React, Next.js

[Github](#)

- Built an **AI semantic search (RAG)** over **jira** support tickets using **Gemini, LangChain, and ChromaDB**, delivering context-grounded answers with **80%** accuracy.
- Architected an asynchronous workflow using **RabbitMQ** to decouple long-running AI processing, slashing the P95 API response time from over **15s to under 100ms** (a 99% improvement) and eliminating UI freezes.
- Containerized all microservices with **Docker**, managed containers using **Kubernetes** and a **Github Actions CI/CD pipeline to AWS**, enabling repeatable builds/tests/deloys.

Restaurant Reservation & Discovery Platform | Spring Boot, MySQL, AWS (Cognito, Lambda, SES, ECR, Elastic Beanstalk), GitHub Actions, JaCoCo, JWT, Docker, CI/CD

[Github](#)

- Engineered the core backend in **Spring Boot**, featuring a booking engine with a **MySQL** geospatial search and a secure, role-based authentication system using **AWS Cognito**, Lambda triggers for an OTP flow, and **JWT** for session management.
- Established a complete CI/CD pipeline using **Github Actions** to automate builds, **testing (JaCoCo)**, and containerized releases to **AWS ECR** for deployment on **AWS Elastic Beanstalk**.
